

Fence diagram of the Maquoketa Group in northern Illinois

The Maquoketa is overlain by Silurian strata, except in parts of La Salle and Livingston Counties, where it is overlain by Pennsylvanian sandstone. The Galena Group underlies the Maquoketa.

Well locations at base of fence

- Limestone
- grainstone (calcareous)
- sandy
- silty
- argillaceous or shaly
- Dolomite
- same variations as limestone
- Sandstone
- Siltstone
- calcareous
- dolomitic
- Shale
- calcareous
- dolomitic
- phosphorite
- iron oxide spheruloids
- pyrite
