INTRODUCTION

The intent of this directory is to list all of the companies (other than oil and gas producers) involved in mining, processing, and manufacturing mineral products in Illinois. Detailed information on crude oil and natural gas producers in Illinois can be found in the Illinois Oil and Gas Association's *Tri-State Oil Men's Directory (Illinois, Indiana, Kentucky)* (13 Main Street, Mount Vernon, Illinois 62864) and the Illinois State Geological Survey's *Monthly Report of Oil and Gas Drilling in Illinois*. Questionnaires were sent out for this directory, significantly increasing the accuracy of this report because company information was updated and many closed locations were eliminated. We were unable to obtain telephone numbers for all the operations.

Information about operations listed has been gathered from the U.S. Bureau of Mines; Illinois Manufacturer's Directory; Illinois Department of Transportation (IDOT); Illinois Department of Mines and Minerals *Annual Coal, Oil and Gas Report*; *Keystone Coal Industry Manual*; and the staff of the Illinois State Geological Survey.

To facilitate locating Illinois mineral producers, the directory lists them by county, company, and commodity. The county and company lists are self-explanatory.

The commodity list is organized alphabetically, first by commodity, then by county, and then by producers within each county. Throughout the commodity list, the three-digit number following the county name is the county number; however, under sand and gravel and stone three additional numbers are given, as explained below. The "remarks" line gives the types of mineral products that may be available, as well as other information. For coal mines, "remarks" is replaced by "mine type." The "rock units" line identifies the geologic formation mined in Illinois (table 1). It does not apply to mineral processing or manufacturing plants.

In the sand and gravel and stone sections of the commodity list, the six-digit numbers following the county names were taken from IDOT, Division of Highways, Bulletin 23, *Sources and Producers of Aggregate for Highway Construction in Illinois* (revised December 1, 1988). The producer/supplier code numbers are defined as follows: the first three numbers are the unique county numbers, the fourth number identifies the aggregate sources as sand and gravel pits (0) or crushed stone quarries (2), and the last two numbers identify the location of the pit or quarry within each county. Sand and gravel pits are shown on figure 1, and crushed stone quarries and mines are shown on figures 2a and 2b. For example:

201 - 023

23 gives the location of the pit within the county,
0 identifies the aggregate source as a sand and gravel pit (fig. 1),
201 is the county number for Winnebago County.

201 - 223

23 gives the location of the quarry,
2 identifies the aggregate source as a crushed stone quarry (fig. 2a),
201 is the county number for Winnebago County.

The term "quarry" is used in the stone section to designate those aggregate sources in which bedrock formations consisting of limestone, dolomite, and one each of chert and sandstone must be drilled and blasted before the rock can be crushed and sized into various products. The term "pit" is used in the sand and gravel section to designate those aggregate sources in which essentially

unconsolidated deposits of sand and gravel with lesser amounts of silt and clay-size material can be excavated, crushed, and sized into various products without drilling and blasting. Because of the many quarry and pit sites in Illinois, all information in the lists and maps must be considered subject to change and frequent revision. Some sites are active only sporadically or may be operated with portable equipment. Quarries and pits operated by county highway departments or township road commissions do not sell aggregate to the general public, but they may submit samples to IDOT laboratories for physical testing.

In the sand and gravel and stone sections, the remarks line gives the construction aggregate products that may be available (IDOT, Bulletin 23, 1988). In the sand and gravel section, the remarks line contains a brief description of these products. If only "sand" or "sand and gravel" is given in the remarks lines, then specific products, other than pit run material, that may be available are not known.

In the stone section, the remarks line may contain a series of letters, which refer to products (table 2). The terms "gravel" and "coarse aggregate" refer to materials that are too large to pass through a no. 4 mesh sieve (4.75-mm or 0.187-inch square openings). The terms "sand" and "fine aggregate" refer to materials that are small enough to pass through a no. 4 mesh sieve, but are too large to pass through a no. 200 mesh sieve (0.075-mm or 0.0029-inch square openings). Various coarse (CA) and fine (FA) construction aggregate products are defined according to their size in *Standard Specifications for Road and Bridge Construction*, by IDOT (Springfield, Illinois), adopted October 1, 1983. This book also defines four coarse and fine aggregate product groups according to their physical properties:

- Class A aggregate products are suitable for use in portland cement concrete,
- Class B aggregate products are suitable for use in Class I interstate highway-quality bituminous concrete paving and base courses,
- Class C aggregate products are suitable for use in lower-quality bituminous concrete paving and base courses, and seal and cover, and
- Class D aggregate products are suitable for use in water-bound macadam surface materials, base courses, shoulder fill, and other low-grade uses.

Table 1 Stratigraphic units mined

Stratigraphic units are listed in order of increasing age. For the Quaternary System, the vertical listing of stratigraphic names may be misleading because several of these were probably deposited at the same time but in different places. For more information on these and other rock units that are not mined, refer to *Handbook of Illinois Stratigraphy*, Bulletin 95, Illinois State Geological Survey (1975).

Quaternary System

- Pleistocene Series
 - Holocene Stage
 - Wisconsinian Stage
 - Cahokia Alluvium (may be partly Holocene)
 - Parkland Sand (may be partly Holocene)
 - Peoria Loess
 - Equality Formation
 - Carmi Member
 - Dalton Member
 - Henry Formation
 - Batavia Member
 - Mackinaw Member
 - Wasco Member
 - Wedron Formation
 - Roxana Silt
 - Illinoian Stage
 - Loveland Silt
 - Glasford Formation
 - Pearl Formation
 - Hagarstown Member
 - Pre-Illinoian
 - Pliocene-Pleistocene
 - Mounds Gravel

Tertiary System

- Porters Creek Formation

Pennsylvanian System

- Mattoon Formation
 - Greenup Limestone Member
 - Omega Limestone Member
- Bond Formation
 - Millersville Limestone Member (central and southern Illinois),
known as Livingston Limestone Member in eastern Illinois,
known as La Salle Limestone Member in northern Illinois
 - Shoal Creek Limestone Member (equivalent to the Carthage Limestone)
- Modesto Formation
 - Lonsdale Limestone Member
 - Piasa Limestone Member
- Carbondale Formation
 - Danville (No. 7) Coal Member
 - Herrin (No. 6) Coal Member
 - Briar Hill (No. 5A) Coal Member
 - Springfield (No. 5) Coal Member
 - Colchester (No. 2) Coal Member
- Spoon Formation
 - Dekoven Coal Member
 - Davis Coal Member
 - Seville Limestone Member

Table 2 Limestone and dolomite products*

A	Class A — coarse-grain concrete aggregate
B	Class A — fine-grain concrete aggregate
C	Class B — coarse-grain bituminous aggregate
D	Class B — fine-grain bituminous aggregate
E	Class B — blend sand
F	Class B — mineral fillers
G	Class C — coarse and fine bituminous aggregate
H	Class C — seal and cover
I	Class D — base materials (type A)
J	Class D — surface material (type B)
K	Agstone
L	Riprap
M	Railroad ballast
N	High-calcium limestone
O	Flagstone
P	Dolomitic lime (dead-burned dolomite, high-magnesium lime)
Q	Limestone and shale for cement
R	Lime
S	Chemical limestone
T	Flux stone
U	Filter stone
V	Industrial sand
W	Finely ground limestone or dolomite. Products may include agstone, stone sand, rock dust, feeding calcium, dairy barn powder, lawn and garden lime, limestock, and poultry grit.

*Letters in the left column are used as codes in the "remarks" line in the stone section of the commodity list.

Figure 1 Sand and gravel pits in Illinois 1988-1989. Within each county, each number corresponds to the last one or two numbers (or letters) of the six-digit number under the county name of each pit on the sand and gravel list in this directory. At this map scale, the pit location spot covers a much larger area than the pit. Where pits are closely spaced, one spot may represent several pits.

Figure 2a Stone quarries and mines in Illinois 1988-1989. These quarries and mines work limestone or dolomite except as noted on figure. Within each county, each number (or letter) corresponds to the last one or two numbers (or letter) of the six-digit number under the county name of each quarry on the stone list in this directory. At this map scale, the quarry location spot covers a much larger area than the quarry. Where quarries are closely spaced, one spot may represent several quarries.

Figure 2b Stone quarries in the seven-county area of northwestern Illinois (enlarged inset from figure 2a.)
