## ABSTRACT

Illinois produced 63,708,000 barrels of crude oil in 1965, down 9.2 percent from 1964. Approximately 43,729,000 barrels, or 68.6 percent, of this production was from secondary recovery waterflood projects. Until near the end of the year, the price of Illinois crude oil at the wells was based on a gravity scale that ranged from \$2.42 a barrel for oil with an API gravity of 20 degrees to \$3.00 a barrel for oil with an API gravity of 40-45 degrees. In December the price was increased 10 cents a barrel for all gravities. Total estimated value of crude oil produced in Illinois in 1965 was \$186,665,000.

Of the 2,101 drilling operations completed by the oil and gas industry, 1,244 were new holes drilled as oil and gas tests. Of these, 573 were completed as oil wells and 11 as shut-in gas wells. In addition, 62 former dry holes were re-worked and completed as oil wells, and 21 former producers were reworked and completed as oil wells in new pay zones. Of the 1,244 new tests for oil and gas, 315, or 25 percent, were wildcats. There were 131 new service wells drilled and 417 old wells, mostly producers, were converted to service wells. Forty-two oil and gas structure tests were drilled. There were 184 well completions reported in connection with underground storage of natural gas.

Nine new oil pools, 17 pool extensions, and 2 new pay zones in pools were discovered in 1965.

Estimated crude oil reserves declined from 404.7 million barrels at the end of 1964 to 363.4 million barrels at the end of 1965.

There are 21 underground natural gas storage projects in operation or being developed in Illinois for gas from other states. Estimated ultimate capacity is 740 billion cubic feet. There are 10 underground mined caverns for storage of liquefied petroleum gases with a total capacity of 2,786,500 barrels.

Controlled waterfloods reported at the end of 1965 totalled 933. There were 115 new projects reported during 1965, offset partially by 35 abandonments.

Of the 45,006,000 barrels of oil produced from secondary recovery during 1965, controlled waterflood projects reported 43,729,000 barrels. Five pressure maintenance projects produced 777,000 barrels, and dump floods produced 500,000 barrels of crude oil. At the end of 1965, cumulative oil produced by fluid injection, including that by dump floods and pressure maintenance projects, was 531,102,000 barrels.

At the end of 1965, 340,097 acres were under fluid injection. This includes 32,721 acres brought under fluid injection by the 115 new projects.

## PART I. OIL AND GAS DEVELOPMENTS

Jacob Van Den Berg

### INTRODUCTION

The oil and gas industry of Illinois continued to make a major contribution to the economy of the state in 1965, with a total production valued at an estimated \$186,665,000.

This report for 1965 is similar in form to the 1964 annual report.

Part I gives information about crude oil production, pool development, exploratory drilling, crude oil reserves, productive acreage, gas production, and underground storage of natural gas and liquefied petroleum gas.

We are grateful for the help of the many individuals and companies whose cooperation made this report possible.

### OIL PRODUCTION AND VALUE

Illinois produced 63,708,000 barrels of crude oil in 1965, down 6,460,000 barrels or 9.2 percent, from the 70,168,000 barrels produced in 1964. The state maintained its position of eighth place among the oil producing states, accounting for about 2.3 percent of the nation's total production in 1965. It ranks first among states east of the Mississippi River.

Cumulative production of crude oil in Illinois to date is 2,595,336,000 barrels. Oil was first discovered in Illinois in 1889 at Litchfield in Montgomery County. Between 1889 and 1904 about 22,000 barrels were produced. With the discovery of the Southeastern Illinois Field in 1904, production rose rapidly, reaching an annual peak of nearly 34 million barrels by the end of the decade. Production then began a gradual decline until 1937 when the Clay City pool was discovered in the deep part of the Illinois Basin. The very successful drilling programs that followed this discovery brought about an increase in production that reached a peak of 147,647,000 barrels in 1940. The rapid decline in production that followed the peak year of 1940 was slowed down by the introduction

of secondary recovery by waterflooding in 1943, but the decline continued to a low of 59 million barrels in 1953. Then the use of hydraulic fracturing and an increase in waterflooding brought about an increase in production to a peak of over 82 million barrels in 1956. An annual production of near 80 million barrels was maintained through 1962, but since then production has declined fairly rapidly.

Average daily production of crude oil in 1965 was 174,542 barrels as compared with 191,716 barrels in 1964. Following is the daily average crude oil production by quarters in 1965:

| Quarter | Barrels | Quarter | Barrels |
|---------|---------|---------|---------|
| First   | 176,391 | Third   | 173,776 |
| Second  | 178,157 | Fourth  | 169,927 |

Table 1A lists by counties the number of permits issued, number of holes drilled, footage drilled, and production for 1965. Holes drilled are classified as tests for oil and gas, structure tests, service wells, and old wells reworked or converted.

Table 1B lists by counties the number of holes and footage drilled in connection with underground storage of natural gas.

With a combined production of 37,794,931 barrels of oil in 1965, the five leading producing counties in Illinois accounted for 59.3 percent of the state's total as follows:

| County   | 1965 production<br>(M bbls) | Percentage<br>of state<br>total |
|----------|-----------------------------|---------------------------------|
| Fayette  | 10,903                      | 17.1                            |
| Marion   | 7,827                       | 12.3                            |
| Lawrence | 6,908                       | 10.8                            |
| White    | 6,515                       | 10.2                            |
| Wayne    | 5,643                       | 8.9                             |
| Total    | 37,796                      | 59.3                            |

Eight fields produced over one million barrels of oil each in 1965. Their combined production of 42,743,643 barrels of oil accounted for 67.1 percent of the state's total production during the year, as follows:

| Pool<br>(C = Consolidated)   | 1965 production<br>(M. bbls) | Percentage<br>of<br>state total |
|------------------------------|------------------------------|---------------------------------|
| <b>Southeastern Illinois</b> |                              |                                 |
| Oil Field                    | 11,231                       | 17.6                            |
| Louden                       | 10,322                       | 16.2                            |
| Salem C.                     | 7,202                        | 11.3                            |
| Clay City C.                 | 5,261                        | 8.2                             |
| New Harmony C.               | 3,798                        | 6.0                             |
| Dale C.                      | 1,957                        | 3.1                             |
| Sailor Springs C.            | 1,697                        | 2.7                             |
| Johnsonville C.              | 1,276                        | 2.0                             |
| Total                        | <u>42,744</u>                | <u>67.1</u>                     |

Until near the end of the year, the price of Illinois crude oil at the wells in 1965 was based on a gravity scale that ranged from \$2.42 a barrel for oil with an API gravity of 20 degrees to \$3.00 a barrel for oil with an API gravity of 40-45 degrees. In December the price was increased 10 cents a barrel for all gravities. The estimated total value of crude oil produced in Illinois in 1965 is \$186,665,000.

#### 1965 DRILLING

Well completions in connection with oil and gas production in 1965 totaled 1,917 (table 1A), down 31 percent from 1964. These included new oil and gas tests and workovers, structure tests, service wells, and service well conversions. In addition 184 well completions (including 134 structure tests) were reported in connection with underground storage of natural gas (table 1B), making a total of 2,101 drilling operations.

There were 1,244 new tests for oil and gas in 1965, down 333 or 21 percent from 1964. They resulted in 573 oil wells, 11 gas wells, and 660 dry holes. In addition, 62 former dry holes were reworked and completed as oil wells, and 21 former producers were reworked and completed as oil wells in new pay zones.

A total of 131 new service wells (water input, salt water disposal, etc.) were drilled in 1965, and 417 old holes, 380 of which had been oil wells, were converted to service wells.

Forty-two structure tests were drilled by the oil and gas producing industry.

Total footage drilled in 1965 was 3,025, - 292 feet, including 2,870,948 feet for oil and gas tests, service wells, and structure tests; and 154,344 feet for underground storage of natural gas. Total footage of new oil and gas tests was 2,608,415 feet, down 488,317 feet or 16 percent from 1964.

New tests for oil and gas were drilled in 61 of the 102 counties in Illinois. The seven leading counties, with over 50 new tests each, accounted for 42 percent of the total. They were Lawrence (106), Wabash (77), Clay (76), Wayne (76), Clinton (67), Sangamon (67), and White (52).

Of the 1,244 new oil and gas tests drilled in 1965, 315 or 25 percent were wildcats (a half mile or more from production). Twenty-two of the wildcats were completed as producers, a success ratio of 7 percent. Of the 124 wildcats drilled from  $\frac{1}{2}$  to  $1\frac{1}{2}$  miles from production, 13 discovered extensions to pools, a success ratio of 10 percent. Of the 191 wildcats drilled over  $1\frac{1}{2}$  miles from production, 9 discovered new pools, a success ratio of 5 percent. Of the 61 counties that had drilling activity in 1965, all but one had some wildcat drilling and 17 had only wildcat drilling. Of this last category, 16 are counties that to date have no production.

#### Discoveries

Nine new oil pools, 17 pool extensions, and 2 new pay zones in pools (tables 2, 3, and 4, respectively) were discovered in 1965. No discovery appears significant.

Zenith East in Wayne County (map no. 8, fig. 1) had 9 producing wells at the end of the year with initial production figures of 15 to 145 barrels of oil a day. Orient pool in Franklin County (map no. 3) had 3 wells producing from Aux Vases Sandstone with initial potentials up to 200 barrels of oil a day. Riverton South pool in Sangamon County (map no. 6) had 3 wells producing from Silurian dolomite with initial potentials up to 100 barrels a day. The 6 other new pools had only 1 well each, 5 of which produce from Mississippian rocks and 1 (Marine West in Madison County) which produces from Devonian limestone. Initial potentials on these last wells ranged from 10 to 81 barrels of oil a day.

None of the extensions to pools (fig. 1 and table 3) or new pay zones in pools (fig. 1 and table 4) seems significant. Two small shut-in gas-well extensions were in Pennsylvanian strata. The other extensions and new pay zones in pools were in Mississippian strata.

Figure 1 - Major tectonic features of Illinois and their relations to significant holes drilled during 1965.  
Numbered holes shown are listed in tables 2, 3, 4, and 5.

### Exploration

Exploratory drilling was fairly well scattered throughout the southern two thirds of the state, with no area standing out sharply from the others.

A very significant test, Texaco, Inc. No. 1 E. Cuppy (map no. 27, fig. 1 and tables 4 and 5) in Sec. 6, T. 6 S., R. 7 E., Hamilton County, was drilled into Precambrian granite in Dale Consolidated pool. With a total depth of 13,051 feet, it is the deepest test in Illinois. No commercial oil was found beneath the Mississippian, and the well was plugged back and completed as a producing well in the St. Louis Limestone at a depth of 3,360 feet.

Another unsuccessful test to the Precambrian, completed in January 1966, too late for inclusion with 1965 statistics, was Texaco's No. 1 R. S. Johnson in Sec. 6, T. 1 N., R. 2 E., Salem Consolidated pool, Marion County. Total depth was 9,215 feet, the second greatest depth reached in Illinois.

There were 57 crew months of core drilling in Illinois in 1965, 42 for gas storage reservoirs in 16 counties in northern Illinois, and 15 for oil and gas exploration. The oil and gas core tests were in 7 counties — 4 on the eastern edge of the basin, 1 in the basin, and 2 in the western shelf area.

At year's end, in the northern end of Clay City Consolidated pool in Jasper County, programs of deepening exhausted wells originally producing from Ste. Genevieve Limestone to new dolomite reservoirs in the St. Louis Limestone 50 to 250 feet below former depths were attracting increasing attention.

### POOLS REVIVED AND ABANDONED IN 1965

Five pools that had been abandoned were revived by new drilling in 1965. They were Beman East, Lawrence County; Exchange North, Marion County; Hidalgo, Jasper County; Hunt City East, Jasper County; and Iola Central, Clay County.

Six pools that had a combined total of 80 wells and cumulative production of 8,444,298 barrels of oil were abandoned in 1965. They were Boulder, Clinton County; Clifford, Williamson County; Ewing East and Macedonia, Franklin County; Stubblefield South, Bond County; and Patoka West, Fayette County. Boulder pool, with 55 wells and cumulative production of 8,119,630 and Patoka West with 19 wells and cumulative production of 303,581 barrels of oil, were aban-

doned because of flooding that will result from the construction of a dam on the Kaskaskia River at Carlyle.

### GEOLOGIC COLUMN

Figure 2 is a generalized geologic column of southern Illinois. It does not show the Pleistocene deposits that cover much of the Illinois bedrock, the Tertiary and Cretaceous rocks that occur in a belt across the southern end of the state, or the approximately 4,000 feet of Ordovician and Cambrian rocks between the base of the St. Peter Sandstone and the top of the Precambrian basement. Pay zones are indicated on the geologic column by a dot.

### CRUDE OIL RESERVES

For the period 1945 through 1965, figure 3 compares total estimated reserves recoverable by methods in operation during the year with estimated reserves added by new drilling and with actual production of oil. During this period, production has exceeded reserves added by new drilling in every year except 1956. The yearly additions to estimated total reserves are due primarily to upward revisions brought about by the inauguration of new methods of recovery such as waterflooding and by increased knowledge of the productive capacity of the oil pools as their production history unfolds.

Since 1956, Illinois estimated oil reserves have been declining at an average rate of about 37.6 million barrels a year. For 1965, the estimated decline was 41.3 million barrels.

|                                 | Millions<br>of barrels |
|---------------------------------|------------------------|
| Estimated reserves Jan. 1, 1965 | 404.7                  |
| Withdrawal by 1965 production   | 63.7                   |
|                                 | 341.0                  |
| Added by new drilling           | 9.6                    |
|                                 | 350.6                  |
| Added by upward revision        | 12.8                   |
| Estimated reserves Jan. 1, 1966 | 363.4                  |

### PRODUCTIVE ACREAGE

An estimated total of 6,400 acres was added to the proved oil productive area of Illinois by the completion of 646 oil wells in 1965. Eleven gas well completions increased the productive

Figure 2 - Generalized geologic column of southern Illinois. Black dots indicate oil and gas pay zones.

Formation names are in capitals; other pay zones are not. About 4,000 feet of lower Ordovician and upper Cambrian rocks under the St. Peter are not shown. Kinderhookian (K), Alexandrian (A), and Cincinnati (Cinc.) Series are abbreviated. Variable vertical scale. (Prepared by David H. Swann.)

area by 400 acres. Nearly all gas wells in Illinois are shut-in wells. The total increase in 1965 of 6,840 acres for both oil and gas makes the total proved productive area in the state 635,455 acres for oil and 34,235 acres for gas.

Figure 3 - Estimated oil reserves versus actual production.

The spacing pattern in Illinois of oil wells producing from less than 4,000 feet deep is 10 acres per well for production from sandstone and 20 acres for production from limestone. For wells producing from between 4,000 and 6,000 feet deep, it is 40 acres for each well, and for wells producing from deeper than 6,000 feet, it is 160 acres. Deepest production in Illinois is from 5,373 feet in Dutch Creek Sandstone in Goldengate Consolidated pool, Wayne County.

#### GAS AND GAS PRODUCTS

An estimated 19 billion cubic feet of gas was produced from Illinois wells during 1965, either as solution gas or from separate gas reservoirs.

Approximately 92 million cubic feet of Illinois dry gas was marketed in Illinois during the year. Twenty-five million cubic feet was collected from the Omaha pool, Gallatin County, and distributed to Omaha and Ridgeway; and 67 million from Raleigh pool, Saline County to Harrisburg and Eldorado.

All gasoline plants in Illinois have been shut down and collection of solution gas to be sold to interstate pipelines has been discontinued.

#### UNDERGROUND STORAGE OF LIQUEFIED PETROLEUM GAS

Table 6 gives data on 10 underground storage facilities for liquefied petroleum gases in Illinois.

Storage is in caverns mined from shale or limestone. Propane, butane, and propylene are the gases being stored.

In 1965, a new storage cavern of 400,000 barrels capacity was completed in Glasford, Peoria County, for Mid-America Pipeline Company, bringing the total estimated storage capacity in Illinois to 2,786,500 barrels.

The first storage cavern for liquefied petroleum gas in Illinois was constructed at Kankakee. The Phillips Petroleum Company, after investigations of conditions in the Kankakee area in 1951 and 1952 and consultations with the staff of the Illinois State Geological Survey, completed the shaft and tunnels early in 1953 and began storage of liquid propane in March 1953.

Illinois State Geological Survey Reprint Series 1956-H discusses geological conditions relating to this type of storage, describes briefly four storage projects in Illinois, and summarizes the possibilities of storing liquefied gases in abandoned coal mines, clay pits, metal mines, quarries, and caves.

#### UNDERGROUND STORAGE OF NATURAL GAS

At the end of 1965, 21 underground natural gas storage projects were in operation or being developed in Illinois. Gas is stored in rocks of Pennsylvanian through Cambrian age, at depths from 350 to 3,900 feet.

Table 7 lists some information about the active storage projects. The total ultimate capacity of the storage reservoirs is estimated to be about 740 billion cubic feet. About half of this is cushion gas not available for withdrawal and delivery to consumers.

At the end of 1965 Natural Gas Pipeline Company of America was proceeding with plans to store gas in the Devonian reservoir in the Louden Field, which previously produced oil.

\*\*Current storage; project under over-pressurization program, ultimate capacity not available.

TABLE 8 - ILLINOIS OIL POOL STATISTICS, 1965

## Explanation of Abbreviations and Symbols

Pool: N, North; S, South; E, East; W, West; C, Consolidated; Cen, Central.  
 Pools located in two or more counties have county names listed in order of oil discovery.

Age: P<sub>C</sub>, Precambrian; Cam, Cambrian; Ord, Ordovician; St. P, St. Peter; Trn, Trenton; Sil, Silurian; Dev, Devonian; Mis, Mississippian; Pen, Pennsylvanian; Shak, Shakopee.

Kind of rock in pay zone: D, dolomite; DS, sandy dolomite; L, limestone; LS, sandy limestone; OL, oolitic limestone; S, sandstone.

Secondary recovery project listed in Part II.

Abd: Pool abandoned.

Structure: A, anticline; C, accumulation due to change in character of rock; D, dome; F, faulting an important factor in oil accumulation; f, faulting a minor factor in oil accumulation; H, strata horizontal or nearly horizontal; L, lens; M, monocline; N, nose; R, reef; T, terrace; U, unconformity. Combinations of the letters are used where more than one factor applies.

Not determinable.

Pool listed in Table 9 (gas production).

\* Illinois portion only.

Rev: Pool revived.

TABLE 9 - ILLINOIS GAS POOL STATISTICS, 1965

## Explanation of Abbreviations and Symbols

Pool: N, North; S, South; E, East; W, West; C, Consolidated. Pools located in two or more counties have county names listed in order of discovery.

Age: Pg, Precambrian; Cam, Cambrian; Ord, Ordovician; St. P, St. Peter; Trn, Trenton; Sil, Silurian; Dev, Devonian; Mis, Mississippian; Pen, Pennsylvanian.

Kind of rock in pay zone: D, dolomite; L, limestone; LS, sandy limestone; S, sandstone.

Abd: Pool abandoned.

Rev: Pool revived.

Structure: A, anticline; D, dome; F, faulting an important factor in gas accumulation; f, faulting a minor factor in gas accumulation; L, lens; M, monocline; R, reef; X, structure not determined. Combinations of the letters are used where more than one factor applies.

x Correct figure not determinable.

\* Pool also listed in table 8 (oil production).  
† Gas storage project. Amount of native gas produced not determinable.  
\*\* Pilot storage in St. Peter.

| Pool; county; location by township and range  | Pay zone                |            | Year of discovery | Area proved in acres | Gas production million cu ft |                                    | Completed to end of 1965 | Completed in 1965 | Number of wells | Producing end of year | Kind of rock | Pay zone           |           | Deepest test zone and depth (ft) |       |

## PART II. WATERFLOOD OPERATIONS

T. F. Lawry and Richard F. Mast

### INTRODUCTION

Part II is the seventeenth consecutive annual review of fluid injection operations for petroleum recovery in Illinois. Waterflooding continues to play a major role in the oil industry in the State.

In 1965, fluid injection projects, excluding dump floods and pressure maintenance projects, produced 43,729,000 barrels of oil. Of this oil, 43,031,000 barrels were reported by operators and 698,000 barrels were estimated from projects which had not been reported in time to be included in this report.

The cooperation of the producers and operators in compiling the data and making the information available to the Geological Survey is gratefully acknowledged.

### SUMMARY OF WATERFLOOD OPERATIONS

Of the 63,708,000 barrels of oil produced in Illinois during 1965, approximately 43,729,000 barrels, or 68.6 percent, was reported by controlled waterfloods operating during the year. Dump floods accounted for approximately 500,000 barrels of oil, and pressure maintenance projects produced 777,000 barrels of oil.

At the end of 1965, there were 933 active waterflood projects in operation. During 1965, 115 new projects were reported, either as operations initiated during 1965 or reported for the first time. The new projects were offset partially by 35 abandonments during the year.

Acreage brought under fluid injection by these new waterflood starts was 32,721, bringing the total to 340,097 acres under fluid injection, including pressure maintenance and abandoned waterfloods.

Table 10, Project Numbers by County and Summary of Waterflood Projects in 1965, is a list of most of the counties in Illinois which produce oil. The numerical index by which waterflood projects are cataloged is shown as well as a summary of fluid injection operations.

Table 11, Illinois Waterfloods Initiated Prior to 1965, presents annual and cumulative data on water injection, oil and water production, and some operational information.

Table 12, Illinois Waterflood Projects Initiated During 1965, lists those projects reported for the first time in 1965. A more complete review of reservoir data is given for the new projects.

Table 13, Illinois Pressure Maintenance Projects Using Water Injection During 1965, lists those projects which have used fluid injection to attempt to obtain maximum recovery of oil by maintaining reservoir pressure during the primary life of the project. This table was revised during 1965 to portray more accurately the pressure maintenance projects.

Table 14, Illinois Waterfloods Reported Abandoned, presents those projects already terminated. In addition to many successful waterflood operations reported, the table includes areas in which the pay zone failed to respond to fluid injection.

Table 15, Summary of Waterflood Statistics, 1949-1965, is a tabulation of summary totals by years, showing the relative growth of fluid injection in Illinois during the years 1949-1965.

Table 16, Illinois Waterflood Operations by Counties, is a computer analysis of 1965 data from reporting waterflood projects on a county by county basis.

Figure 4 (p. 121-130) shows the oil and gas fields in Illinois and the areas of waterflood and pressure maintenance operations during 1965.

## CONCLUSIONS

While secondary methods of oil recovery in Illinois continued to play a dominant role in the oil industry in the State during 1965, the loss of some 4,200,000 barrels of oil compared to 1964 was a disturbing factor, although not entirely unanticipated in view of the over-all loss of 6.4 million barrels for the year.

There seems to be no unique reason for the decline in waterflood oil other than the fact that some of the older, significant projects are approaching their economic limit.

Although there was much interest manifested by many operators in the recovery of oil by tertiary recovery methods, there were no new projects known by the Geological Survey to have been initiated during 1965. The secrecy which usually surrounds such projects may have served to make some experimental work obscure.

Data for tables 10-16 were key-punched and then tabulated by computer.

## ABBREVIATIONS

The following abbreviations have been used in tables 10 through 16:

|      |                                 |
|------|---------------------------------|
| abd  | - abandoned                     |
| adj  | - adjusted                      |
| coop | - cooperates, cooperating       |
| cum  | - cumulative                    |
| disc | - discontinued                  |
| est  | - estimate, estimated           |
| excl | - excludes, excluding, excluded |
| form | - formerly                      |
| incl | - includes, including, included |
| inj  | - injection                     |
| op   | - operator                      |
| prev | - previous                      |
| prim | - primary                       |
| prod | - production                    |
| temp | - temporary, temporarily        |

\* Waterflood oil includes estimated dump flood production. All other figures exclude dump flood production.

† Current oil plus previous cumulative does not equal current cumulative because of yearly revisions.

\*\* Includes abandoned acreage with waterfloods and pressure maintenance.

| Year | Waterflood prod. % of total prod.* | No. of wells in flood projects |          | Productive acreage |         | % of total acreage under flood | Cumulative waterflood oil recovery/ acre subjected to injection | Cumulative injected water/ cumulative produced oil |
